

Author Index to Volume 25

In this index are listed names of authors and titles of their articles and notes. Abstracts of papers read at meetings are designated by the letter (A) after the number of the page on which the abstract may be found. Papers read at meetings for which an abstract has not been published are not included; however, they are indexed in the Analytical Subject Index. The symbol (L) after an entry signifies a Letter to the Editor.

- Ackerman, Eugene and William Holak.** Reciprocity calibrations—454
- Adams, Carl E.** Galileo and the leaning tower—389(L)
- Adams, Sam and Barbara Strawitz.** Some electroscope variations—586(L)
—(see Strawitz, Barbara)—494(L)
- Adler, F. T.** Analog computers and their usefulness in teaching—269(A)
- Adler, Richard B.** Science and engineering education—109
- Ainslie, D. S.** Resistance in absolute units by a combination of bridge and resonant circuits—44(A)
- Ainslie, Donald S.** Resistance in absolute units by a combination of bridge and resonant circuits—1
- Alexeff, Igor.** Easily remembered derivation of $PV^Y = C$ for the student—488
- Amar, Henri and Enrique Loedel.** Geometric representation of the Lorentz transformation—326(L)
- Andrews, C. L.** Demonstrations of microwave optics—590(A)
- Arakengy, Albert.** Liouville's theorem and the intensity of beams—519
- Arfken, George.** Neglected quadrupole—481
- Armstrong, H. L.** On a space-time representation of nonrelativistic wave mechanics—195
- Askovitz, S. I.** Centroids, vectors, and least squares—404(A)
—Vector resultants obtained graphically through centroids—254
- Auerbach, Louis.** Some simple Christiansen filters—440
- Baez, Albert V.** Experiment on velocity and acceleration using an automobile—129
—Magnification of a telescope—388(L)
—Model to illustrate some properties of vectors in three dimensions—380
—Pinhole-camera experiment for the introductory physics course—636
—Quantitative relationships for charged inflated balloons—301
—Rayotron (a high-voltage generator and x-ray source)—499
—Simplest hand spectroscope—265(L)
—Some notes on laboratory procedures in a small college—386(L)
- Bagliolini, Raimondo.** On a remarkable relation between atomic and universal constants—324
- Barbour, J. P., H. L. Floyd, B. W. Strayer, E. E. Martin, J. K. Troian, and W. P. Dyke.** Effect of a dc field on the life and stability of pulsed, heated, field emission cathodes—496(A)
- Barnes, George.** Addition to the ballistic pendulum experiment—452
—Coefficient of restitution and the classification of collisions—407(A)
—Directions for applying Kirchhoff's rules—40
—Hatchet or hacksaw blade planimeter—25
—Hatchet planimeter—494(L)
—Meeting of the Northern California Section—587
—Study of some collision phenomena—496(A)
- Barr, E. Scott.** Anniversaries in 1957 of interest to physicists—370
- Barron, William H.** Temperature scales—326(L)
- Bartlett, A. A.** (see Hunt, Douglas)—391(A)
- Bartunek, Paul F.** Is laboratory worth its salt?—392(A)
—Physics, an earthly and moon-struck subject—392(A)
- Benade, A. H. and R. E. Chrien.** Sewing-needle proportional counter—313
- Bennett, D. M.** Meeting of the Kentucky Section—399
- Benumof, Reuben.** Definition of magnetic flux density B —405(A)
- Bertsch, Carl V. and Bernard A. Greenbaum.** Experiment on Snell's law—402(A)
- Billings, D. E.** (see Cooper, R. H.)—390(A)
- Blankenbecler, R.** Integrals over the Fermi function—279
- Blitzer, Leon and Albert D. Wheeler.** Maximum range of a projectile in vacuum on a spherical earth—21; Erratum—240
- Blumenthal, Ralph H.** Split sections and learning in college physics—352
- Bohr, Aage.** On the structure of atomic nuclei—547
- Boley, Forrest L.** Welch demonstration cloud chamber No. 2158B—330
- Brightman, Virginia M.** (see Frye, Royal M.)—553
- Bronstein, Leonard** (see Hersh, Herbert N.)—306
- Brown, Sanborn C.** Elementary physics laboratory instruction at the Massachusetts Institute of Technology—446
- Brown, Thomas B.** Simple optics for an elliptic polarimeter, and "specimens" of elliptically polarized light—403(A)
- Bryant, Leslie H.** Simplification of relativistic mass equations—484
—Some notes on the simplification of equations involving relativistic mass—588(A)
- Bullen, T. G.** Determination of the power characteristics of an electric motor using a Prony brake—382
- Bunge, Mario.** Lagrangian formulation and mechanical interpretation—211
- Burling, Richard L.** Black boxes in the instructional laboratory—492(L)
- Bushkovitch, A. V.** Reconstruction in physics—193
- Butler, Alfred B.** Lecture demonstration with temperature-sensitive paint—497(A)
- Calder, W. A.** Review of *Scientific uses of earth satellites*—396
- Cullen, Earl.** Electrostatic potential in crystals—138
- Capaciello, A. and M. Mainardi.** Charge and discharge of a capacitor—44(A)
—and William Spaven. Interference of sinusoidal waves—403(A)
- Carome, E. F., F. A. Gutowski, and D. E. Schuele.** Basic concepts of ultrasonic interferometry in liquids—556
- Chao, Bella.** On the forces between potential wells which share a particle—249
- Chapman, Seville.** Erratum: rationalized mks system of units—50
—and Harold Meese. Effective and inexpensive slits for teaching physical optics—135
- Chen, Henry S. C.** Let us use one hand—404(A)
—Note on the principal frequencies of a double spring-mass system—311
- Chrien, R. E.** (see Benade, A. H.)—313
- Christie, Dan E.** Multipurpose mnemonic for thermodynamic equations—486
- Clancy, Edward P.** Atomic energy: an adventure in learning—565
—Inexpensive apparatus for the study of circular motion—41
—Study of the triode in the elementary laboratory—204
- Clark, Clifton Bob.** Vibrating spring experiment—322
- Coffman, Moody L.** Example of modern quantum theory—587(L)
- Cohn, Byron E., Mario Iona, and Alex M. Sturrock.** Simple laboratory method for the determination of the coefficient of heat conductivity—392(A)
—(see Williams, Walter)—391(A)
- Comley, Robert E. and Robert J. Talham.** Universal microwave probe—568
- Cook, C. Sharp.** Suggestion regarding the introduction of the concept of phase change for reflected radiation—92
- Cooper, B. H. and D. E. Billings.** Height gradient of the emission corona—390(A)

—(see Williams, Walter)—391(A)
- Comley, Robert E. and Robert J. Talham.** Universal microwave probe—568
- Cook, C. Sharp.** Suggestion regarding the introduction of the concept of phase change for reflected radiation—92
- Cooper, B. H. and D. E. Billings.** Height gradient of the emission corona—390(A)

- Correll, Malcolm.** Dipole field configurations as seen from various angles—406(A)
 —(see Worrell, Francis T.)—406(A)
 —Some temperature-sensitive phenomena with orthotoluidine drops—407(A)
- Cowan, R. D.** Derivation of the energy-distribution formulas of quantum statistics—463
- Cram, S. Winston.** Committee on Secondary Physics Teaching Materials—a progress report—274
- Crasemann, Bernd J. G. Pengra.** Gamma-ray spectrum of 10-year barium-133—497(A)
 —Meetings of the Oregon Section—267, 392, 496
- Cullen, Thomas L.** Regions of high gamma radiation in Brazil—406(A)
- Dahler, C. E.** Meeting of the Wisconsin Section and Minnesota Section—47
- Davis, Francis K., Jr.** Radiation minimum temperatures—150
- Davis, K. E.** Reed College and the Portland program for superior students—207(A)
- De Bock, A.** (see De Smedt, J.)—152
 —(see De Smedt, J.)—155
- De Meulenaer, J. and H. Tompa.** Matrix representation of the square roots of —1—493(L)
- De Smedt, J. and A. De Bock.** Didactical absolute viscosimeter—152
 —and A. De Bock. Horizontal pendulum with variable modulus of torsion (resonance curve)—155
- Demos, P. T.** Device for the visual demonstration of group velocity—383
- Dickinson, B. H.** (see Osgood, Thomas H.)—414
- Dilliey, Norman R.** Meeting of the Southern California Section—389
- Doan, Richard L.** Review of *Atomic quest*—397
- Drever, R. W. P.** (see Molijk, A.)—165
- Duckworth, H. E.** Weighing atoms—503
- Dyke, W. P.** (see Barbour, J. P.)—496(A)
- Eaton, V. E.** Toronto meeting, June 20–22, 1956, program and abstracts—43
- Eaton, Vernet E.** Twenty-sixth annual meeting, New York, January 30–February 1, 1957, program and abstracts—400
- Edwards, M. H.** Note on a simple radiometer demonstration—119(L)
- Eich, Alfred M., Jr.** Inexpensive diffraction slits—203
- Eldridge, John A., M. Willard Lampe, E. P. T. Tyndall, and J. A. Van Allen.** George Walter Stewart, 1876–1956—276
- Ellis, Joseph W.** Green flash from a looming setting sun—387(L)
- Eneck, F. D.** Conversion of recent values of C_p to C_v of KCl and comparison with theory—589(A)
- Engle, Daniel G.** Determination of the coefficient of linear thermal expansion of potassium chloride at high temperatures—589(A)
- Eppenstein, W.** Place of theory in the general physics laboratory—46(A)
- Eriksen, Willard L.** Satisfactory unknown cell for general physics potentiometer experiments—392(A)
- Etters, R. D.** Infrared transmission through germanium from one to twenty-five microns wavelength as a function of temperature—267(A)
- Fallon, Leslie D.** Meeting of the Western Pennsylvania Section—268
- Fan, H. Y.** Review of *Introduction to solid state physics*—330
- Faris, John J.** Sensitivity of a microwave paramagnetic resonance spectrometer—391(A)
- Feenberg, Eugene** (see Robinson, Joseph D.)—490
- Filler, A. S.** Tensor analysis in an intermediate mechanics course—268(A)
- Finley, Lile W.** Meeting of the Illinois Section—269
- Fischer, Gaston.** On phase transformations—100
- Floyd, R. L.** (see Barbour, J. P.)—496 (A)
- Ford, Kenneth W.** Review of *Elementary nuclear theory*—48
- Fountain, Stephen J.** Coefficient of restitution for "collisions" of charged spheres—588(A)
- Freeman, Ira M.** Experiment on transverse waves in a cord—486
- Frye, Royal M. and Virginia M. Brigham.** Paradox of the twins—553
- Fulcher, Gordon S.** Centrifugal forces and Newton's laws of motion—587(L)
- Fuschillo, N.** Automatic constant pressure regulator for gas viscosity and other measurements—648
- Gale, Grant O.** Flux changes in ferromagnetic wires—404(A)
- Gardner, M. E.** Integers in the sum of reciprocals—587(A)
- Gerard, Brother.** New facilities and the physics program at St. Mary's College—47(A)
- Golay, Marcel J. E.** Note on relativistic clock experiments—494(L)
- Goldberg, P. A.** Worldwide propagation of super low-frequency lightning radiation—268(A)
- Goldowski-Renner, N.** Validity of long laboratory periods in a general physics course—402(A)
- Good, R. H., Jr.** (see Schectman, R. M.)—219
- Goodwin, R. A. and E. R. Pinkston.** Variation of the multiple-choice question—46(A)
- Goodwin, Ralph A.** Some variations of the multiple choice question—403(A)
- Gordon, M. M.** Study of classical scattering theory—32
- Gorton, H. Clay.** Method to facilitate observation of the green flash—586(L)
- Grammer, Johnny R.** Surface tension phenomena—588(A)
- Green, John R.** Summer course in physics for high school teachers—262
- and Roy Thomas.** Squirtting manometer—98
- Greenbaum, Bernard A.** (see Bertsch, Carl V.)—402(A)
- Griffith, J. W.** New Corning glasses and their application—268(A)
- Grossman, Lawrence M.** First law of thermodynamics for a continuous medium in mass motion—257
- Gunn, Ross.** Electrification of aerosols by ionic diffusion—542
- Gutowski, F. A.** (see Carome, E. F.)—556
- Hanson, Howard G.** Sodium D-lines intensity during warmup of sodium arc lamp—327(A)
- Hart, John B.** Dr. Bunge's Lagrangian formulation—495(L)
 —Manometer dc amplifier—487
- Heid, Roland L., O. S. B.** Friction in elementary dynamic problems—268(A)
- Hellemann, J. J.** Pulse: a simplified approach to wave motion—45(A)
- Hersh, Herbert N. and Leonard Bronstein.** Demonstration of electron and hole injection in alkali halides—306
- Hertz, Heinrich Rudolf.** On the relations between light and electricity (reprint)—336
- Hirsh, F. B., Jr.** Concerning the fellows of the American Physical Society—303
- Hitchcock, R. C.** Which way does Carmen rotate and why?—269(A)
- Hoffmann, Paul O. and Elvind G. F. Bamberg.** Computation demonstration in mechanics—285
- Holak, William** (see Ackerman, Eugene)—454
- Holroyd, Louis V.** Indicating potentiometer for the classroom—581
- Holtom, Gerald.** Syllabus for the one-year college course in physical science—425
- Horigan, J. A.** Solution of Laplace's equation by relaxation methods on a digital computer—497(A)
- Horton, George W.** Christmas examination—general physics—531
- Howe, Richard H.** Simple radio-frequency demonstration oscillator for use at 222 mc with demonstration—406(A)
- Hoxton, L. G.** Interference pattern of beats—507(A)
 —Ratio of the specific heats' and thermodynamics—460
 —Ripple tank using the method of striae—404(A)
- Hunt, Douglas and A. A. Bartlett.** Laboratory experiment on the Compton effect—391(A)
- Hurd, Paul Dell.** Look at high school physics teaching—207(A)
- Iona, Mario** (see Cohn, Byron E.)—392(A)
- Ivey, D. G.** Experiments in viscoelasticity—45(A)

- Jensen, Harald C.** New demonstration of the hysteresis loop in iron—384
—Production of Chladni figures—203
—(see Kannewurf, C. R.)—442
—Theory for simple machines—599
- Johnston, Lawrence H.** Present status of the Minnesota linear accelerator—47(A)
- Kannewurf, C. R. and Harald C. Jensen.** Coupled oscillations—442
- Karie, J. H.** Report on the total solar eclipse of June 30, 1954—268(A)
- Karpins, Robert and Kenneth M. Watson.** Two-nucleon forces and nuclear saturation—641
- Keith, H. D.** Simplified theory of ship waves—466
- Kelly, W. C.** Procedures for obtaining surplus government property of interest to physics teachers—4
—Report on the Pittsburgh conference on the need for high school physics in an industrial community—331
—(see Michels, Walter C.)—436
- Kettner, M. E.** Recent atomic mass measurements—47(A)
- Khalifa, M. M.** Properties of vacuum as a switching ambient—45(A)
- Kikuchi, B.** Review of *Statistical mechanics*—271
- Kirchner, F.** Determination of the velocity of light from electromagnetic measurements according to W. Weber and R. Kohlrausch—613
- Kirkpatrick, Paul.** Five lecture demonstrations—207(A)
—Note on the Carnot cycle—382
—Notes on jumping—614
- Kolossvary, B. G.** Atomic and nuclear physics laboratory for small colleges—46(A)
- Kruglik, Haym.** What kind of cooperation with colleges do high school physics teachers want?—318
- Kyame, Joseph John.** Matrix representation of thermodynamic fundamentals—67
- Lamarsh, John R.** Forgotten magneto-optical effect—17
- Lampe, M. Willard** (see Eldridge, John A.)—276
- Lamson, Horatio W.** Review of *Applied electrical measurements*—498
- Landegren, G. F.** Heat bridge for measuring thermal conductivity—532
—Newton's law of cooling—648
- Leffler, Glenn Q.** Basic undergraduate physics preparation—pre-engineering, secondary school teaching, industry, graduate study—406(A)
- Leifson, S. W.** Experiments with condensers—587(A)
—Measurement of high resistance—89, 207(A)
- Leitmann, G.** Determination of air density at high altitude by means of an earth satellite—115
- Leitner, A.** Review of *Principles and techniques of applied mathematics*—208
- Little, Edward M.** Some experiments should emphasize principles, not precision—491
- Loedel, Enrique** (see Amar, Henri)—326(L)
- Long, Howard C.** Earth's magnetic field—what is it?—590(A)
- Lonaeth, A. T.** Oregon State College digital computer—497(A)
- Lord, J. J.** High-energy proton-proton collisions in the Bev range of energies—497(A)
- Lovell, D. J.** Green flash at sunset—206(L)
- Lowry, W. N.** Special switches for the *B-H* curve experiment—589(A)
- Loyd, C. M.** Meeting of the Texas Section—327
- MacArthur, John W.** Concerning Dr. Satterly's ice and water vibration experiment—205
- MacColl, L. A.** Theory of the relativistic oscillator—535
- MacDonald, Norman, Theodore Pohrt, and David Woodbridge.** Search for correlation between phenomena of solar origin and upper air circulation—390(A)
- MacPherson, James.** Physical derivation of Green's theorem—589(A)
- Madigosky, Walter.** Collision diameters and quadrupole moments from microwave spectroscopy—589(A)
- Magram, Sidney J.** Concentration and size of photons from particle interpretation of blackbody radiation—283
- Mainardi, M.** (see Capacelatro, A.)—44(A)
- Manley, J. H.** Gravitational analogues in modern physics—406(A)
—Representation of effects of the Overhauser type—339
- Manning, Kenneth V.** Course in lecture demonstrations—405(A)
- Manning, Thurston E.** New apparatus for two-beam optical interference—402(A)
- Marsteller, W. W.** Archimedes and the floating needle—45(A)
- Martin, E. E.** (see Barbour, J. P.)—496(A)
- Marzoff, John G.** Computing the Hamiltonian for conservative systems—583
- Mascarenhas, Sérgio.** Half-wave, full-wave rectification and filter action without an oscilloscope—584
- McCay, Myron B.** (see Michels, Walter C.)—436
- McClurg, G. O.** Correction to the magnetic field distribution for an ellipsoid—266(L)
- McCune, Robert F.** Physical pendulum—590(A)
- McDonald, Daniel F.** (see Mulligan, Joseph F., S. J.)—180
- McGinnis, E. A.** Our electronics majors take acoustics and like it—588(A)
- McLachlan, Dan, Jr.** Review of *Elementary crystallography*—272
—Unified treatment of the vibrating arm. Part I. Solution when the restoring force is expressed as $F = -\psi\theta - 228$; Part II. Solution when the restoring force is positive and also when it is expressed as a power series in ψ —241
- McMorrow, D. B.** Temperature conversion—265(L)
- Meese, Harold** (see Chapman, Seville)—135

Analytic Subject Index to Volume 25

In this index are listed titles of articles and notes, together with the names of their authors. Classification is based upon analyses of contents of the articles, rather than upon titles alone. The symbol (A) designates an abstract of a paper read at a meeting; (T) signifies title only, and (L) designates a Letter to the Editor.

To facilitate reference to any desired subject, this index is divided into sections arranged alphabetically. The titles of these sections are as follows:

| | | |
|--|---------------------------------------|--|
| Accelerators | Geophysics | Radio and television |
| Aerophysics | Governmental and industrial research | Relativity |
| American Association of Physics Teachers | Heat and thermodynamics | Reports, announcements, and news |
| Apparatus | History and biography | Rockets |
| Astrophysics | Laboratory arts and techniques | Secondary school physics |
| Biophysics | Laboratory organization and operation | Social and economic aspects of science |
| Courses | Light | Solid-state physics |
| Demonstrations | Mathematics | Sound |
| Department administration, maintenance, and activities | Mechanics, classical | Teacher training |
| Education, physics and science | Mechanics, quantum | Testing, theory and techniques |
| Electricity and magnetism | Microwaves | Textbooks |
| Experiments | Nuclear physics | Units, dimensions, and terminology |
| General physics, educational aspects | Philosophy of science | Visual materials and methods |
| General physics, instructional techniques | Properties of matter | X-rays |

Accelerators

- High-energy cyclotrons, T. A. Welton—328(T)
- Present status of the Minnesota linear accelerator, Lawrence H. Johnston—47(A)
- Production of pi mesons, mu mesons, and neutrons with the synchrocyclotron, Albert Crewe—270(T)
- Status of high-energy accelerators and corresponding research, Harold V. Argo—328(T)

Aerophysics

- Bernoulli's principle and atmospheric pressure, Julius Sumner Miller—42(L)
- Determination of air density at high altitude by means of an earth satellite, G. Leitmann—115
- Law of atmospheres, A. B. Stewart—116
- Meteorological parameters from constant level balloon flight data, Guy A. Franceschini—328(T)
- Search for correlation between phenomena of solar origin and upper air circulation, Norman MacDonald, Theodore Pohlreite, and David Woodbridge—390(A)

American Association of Physics Teachers

- AAAPT-AIP visiting scientists program—424
- AAAPT membership, K. E. Davis—208(T)
- AAAPT study of apparatus for the teaching of physics, W. C. Kelly—44(T)
- American Association of Physics Teachers, Frank Verbrugge—78, 253, 302
- American Journal of Physics*, Report of the Editor for the year 1956, Thomas H. Osgood and B. H. Dickinson—414
- Annual business meeting, Mosaic Room, Hotel New Yorker, February 1, 1957, Frank Verbrugge—414
- Award for notable contributions to the teaching of physics: the Oersted Medal—256
- Committee on Secondary Physics Teaching Materials—a progress report, S. Winston Cram—274
- Committees for 1957—408
- Conference on introductory physics courses, Frank Verbrugge—127
- Current activities of the AAPT, R. Ronald Palmer—47(T)
- Improving the quality and effectiveness of introductory physics courses—report of a conference sponsored by AAPT, Frank Verbrugge, Walter C. Michels, Francis W. Sears, and R. Ronald Palmer—417
- Microfilm edition of the *American Journal of Physics*—348
- Minutes of the annual meeting of the Council, Frank Verbrugge—410

Necrology: George Walter Stewart, 1876–1956, John A. Eldridge, M. Willard Lampe, E. P. T. Tyndall, and J. A. Van Allen—276

New members of the Association—50, 128, 209, 277, 334, 398, 501, 590

1958 Summer Meeting—351

Oersted Medal—Presentation of Mark W. Zemansky as 1956 Oersted Medalist, R. Ronald Palmer—347; Address: Fashions in thermodynamics, Mark W. Zemansky—349, 401(T)

Reminiscences of the early years of the Association, David L. Webster—131, 207(T); Errata—280

Report of the AAPT Council Representative, George Barnes—587(T)

Report on the AAPT September conference on the objectives and methods of introductory college physics, Raymond Seeger—208(T)

Report of the Committee on Apparatus for Educational Institutions, W. C. Kelly—4

Report of the Treasurer, Francis W. Sears—415

Richtmyer Memorial Lecture—Antinucleons, E. Segré—363, 401(T), 588(T)

Section News: Central Pennsylvania, F. W. Van Name, Jr.—588; Chesapeake, John R. Smithson—208, 496; Bernard B. Watson—359; Chicago, R. T. O'Connor—270; Colorado-Wyoming—390; Illinois, Lile W. Finley—269; Kentucky, D. M. Bennett—399; Minnesota, C. E. Dahler—47; Northern California, George Barnes—I—387; Oregon, Bernd Crasemann—267, 392, 496; Southern California, Thomas N. Wilson—121, Norman R. Dilley—389; Texas, C. M. Loyd—327; Washington, Martin E. Nelson—497; Western Pennsylvania, Leslie D. Fallon—268; Wisconsin, C. E. Dahler—47

Summer meeting at the University of Toronto, June 20–22, 1956, program and abstracts, V. E. Eaton—43

Twenty-sixth annual meeting, New York, January 30–February 1, 1957, program and abstracts, Verner E. Eaton—400

Apparatus

- Analog computers and their usefulness in teaching, F. T. Adler—269(A)
- Anticoincidence Compton shields for scintillation counters, D. E. Rehfuss—496(A)
- Automatic constant pressure regulator for gas viscosity and other measurements, N. Fuschillo—648
- Black boxes in the instructional laboratory, Richard L. Burling—492(L)
- Construction of a sensitive paramagnetic resonance spectrometer, David F. Wait—391(A)

- Coupled torsion pendulums, Julius Sumner Miller—649(L)
 Demonstration of gravitational attraction with the Cavendish balance, Hans Meissner—639
 Didactical absolute viscosimeter, J. De Smedt and A. De Bock—152
 Electron analog computers illustrated by a demonstration of the WRC Donner computer, J. Riedel—269(T)
 Elementary electronic digital computer, W. E. Flynt—328(T)
 Féry-type monochromator, Walter Williams and Byron E. Cohn—391(A)
 Franck-Hertz experimental equipment, John R. Townsend—273
 Germanium available through Apparatus Committee—343
 Gravitation torsion balance, E. M. Purcell—393
 Hatchet or hacksaw blade planimeter, George Barnes—25, 494(L)
 Heat bridge for measuring thermal conductivity, G. F. Landegren—532
 Horizontal pendulum with variable modulus of torsion (resonance curve), J. De Smedt and A. De Bock—155
 Improvised apparatus for the determination of specific heat, Barbara Strawitz and Sam Adams—494(L)
 Indicating potentiometer for the classroom, Louis V. Holroyd—581
 Inexpensive apparatus for the study of circular motion, Edward P. Clancy—41
 Inexpensive diffraction slits, Alfred M. Eich, Jr.—203
 Instrumentation, A. H. Peterson—269(A)
 Interference of sinusoidal waves, A. Capelaturo and William Spaven—403(A)
 Manometer dc amplifier, John B. Hart—487
 Measurement of angular correlation of annihilation radiation, apparatus for, Rudolfo Castillo-Bahena—328(T)
 Method for obtaining accelerations, Jacob W. Moelk—323
 New apparatus for two-beam optical interference, Thurston E. Manning—402(A)
 New version of the Edwards ampere balance, Charles Williamson—268(A), 403(A)
 Note on the electromagnetic pump, Norman R. Dilley—121(T)
 Note on the electrophorus, Julius Sumner Miller—405(A)
 Procedures for obtaining surplus government property of interest to physics teachers, W. C. Kelly—4
 Proportional counters for demonstration experiments, A. Moljk and R. W. P. Drever—165
 Rayotron (a high-voltage generator and x-ray source), Albert V. Baez—499
 Ripple tank using the method of striae, L. G. Hoxton—404(A)
 Satisfactory unknown cell for general physics potentiometer experiments, Willard L. Erickson—392(A)
 Sewing-needle proportional counter, A. H. Benade and R. E. Chrien—313
 Some electroscope variations, Sam Adams and Barbara Strawitz—586(L)
 Some simple Christiansen filters, Louis Auerbach—440
 Special switches for the *B-H* curve experiment, W. N. Lowry—589(A)
 Teaching with the polygraphe, M. G. Odier—51
 Universal microwave probe, Robert E. Comley and Robert J. Talham—568
 Use of physics apparatus in the first course in college physics, O. L. Railback—270(T)
 Vapor depletion in a Wilson cloud chamber, Wm. B. Good—328(T)
 Welch demonstration cloud chamber No. 2158B, Forrest I. Boley—330
- Astrophysics**
 Birth and death of a star, Allan Sandage—525
 Height gradient of the emission corona, R. H. Cooper and D. E. Billings—390(A)
 Nuclear reactions in stars, William Fowler—390(T)
 Radio-astronomy, D. A. MacRae—44(T)
 Report on the total solar eclipse of June 30, 1954, J. H. Karle—268(A)
 Satellites of the earth, James A. Van Allen—269(T)
 Search for correlation between phenomena of solar origin and upper air circulation, Norman MacDonald, Theodore Pohlre, and David Woodbridge—390(A)

Biophysics

Neutron reactor in medical physics, Dr. Amos Norman—121(T)

Courses

- Atomic energy: an adventure in learning, Edward P. Clancy—565
 Cooperative course in electronic physics, John S. O'Conor—404(A)
 Electricity and magnetism courses to service both engineering and physical science students, Robert H. Frost—121(T)
 Elementary physics course presented over television, Alan T. Wager—9
 Lecture demonstrations, course in, Kenneth V. Manning—405(A)
 One-year introductory course in a liberal arts college, Walter C. Michels—430
 Our electronics majors take acoustics and like it, E. A. McGinnis—588(A)
 Refresher course for high school physics teachers, A. D. Misener—46(A)
 Summer course in physics for high school teachers, John R. Green—262
 Syllabus for the one-year college course in physical science, Gerald Holton—425
 Three-semester introductory course for engineers and science majors, R. M. Whaley—432

Demonstrations

- Array of demonstration experiments, Julius Sumner Miller—588(T)
 Beats and alpha particle counter, Harold M. Waage—405(A)
 Bernoulli's principle and atmospheric pressure, Julius Sumner Miller—42(L)
 Compressional wave propagation, demonstration of, Julius Sumner Miller—387(L)
 Computation demonstration in mechanics, Paul O. Hoffmann and Elvind G. F. Ramberg—285
 Coupled oscillations, C. R. Kannevurf and Harald C. Jensen—442
 Coupled torsion pendulums, Julius Sumner Miller—649(L)
 Course in lecture demonstrations, Kenneth V. Manning—405(A)
 Critical phenomena for pure substances and mixtures, demonstration of, H. H. Reamer and B. H. Sage—58
 Device for the visual demonstration of group velocity, P. T. Demos—385
 Effective and inexpensive slits for teaching physical optics, Seville Chapman and Harold Meese—135
 Electrical transients, demonstration of, Douglas H. Rogers—64
 Electron and hole injection in alkali halides, demonstration of, Herbert N. Hersh and Leonard Bronstein—306
 Example of modern quantum theory, Moody L. Coffman—587(L)
 Five lecture demonstrations, Paul Kirkpatrick—207(A)
 Gravitational analogues in modern physics, J. H. Manley—406(A)
 Gravitational attraction, demonstration with the Cavendish balance, Hans Meissner—639
 Half-wave, full-wave rectification and filter action without an oscilloscope, Sérgio Mascarenhas—584
 Indicating potentiometer for the classroom, Louis V. Holroyd—581
 Lecture demonstration with temperature-sensitive paint, Alfred B. Butler—497(A)
 Method for obtaining accelerations, Jacob W. Moelk—323
 Microwave optics, demonstrations of, C. L. Andrews—690(A)
 New demonstration of the hysteresis loop in iron, Harald C. Jensen—384
 Note on a simple radiometer demonstration, M. H. Edwards—119(L)
 Optical effects with microwaves, demonstration of, C. L. Andrews—44(T)
 Philosophy of demonstration experiments, in school and college, Eric M. Rogers—405(A)
 Precession of a gyro and a demonstration of the gyrocompass, G. D. Scott—45(A)
 Precession of a gyro and model of a gyro-compass, G. David Scott—80
 Principle of the capacitor microphone, demonstration of, F. E. White—39
 Proportional counters for demonstration experiments, A. Moljk and R. W. P. Drever—165

Quantitative relationships for charged inflated balloons, Albert V. Baez—301
 Simple radio-frequency demonstration oscillator for use at 222 mc with demonstration, Richard H. Howe—406(A)
 Simplest hand spectroscope, Albert V. Baez—265(L)
 Some experiments should emphasize principles, not precision, Edward M. Little—491
 Some physics demonstrations that work, B. E. Schulze—328(T)
 Some temperature-sensitive phenomena with orthotoluidine drops, Malcolm Correll—407(A)
 Thin films, demonstrating the color of, Robert G. Packard—328(T)
 Toy called CUM BAC, Julius Sumner Miller—587(L)
 Very real demonstration of Pascal's principle, Julius Sumner Miller—326(L)
 Which way does Carmen rotate and why? R. C. Hitchcock—269(A)

Department administration, maintenance, and activities
 New facilities and the physics program at St. Mary's College, Brother Gerard—47(A)
 New physics and engineering building at Colorado A & M College, Lawrence N. Hadley, Jr.—392(T)
 Oregon State College digital computer, A. T. Lomseth—497(A)

Education, physics and science
 Analog computers and their usefulness in teaching, F. T. Adler—269(A)
 Atomic energy: an adventure in learning, Edward P. Clancy—565
 Authoritarianism *versus* imagination in physics teaching, Walter C. Michels—82
 Basic undergraduate physics preparation, Glenn Q. Leffler, Roger N. Morrow, and Lile W. Finley—269(T)
 Basic undergraduate physics preparation—pre-engineering, secondary school teaching, industry, graduate study, Glenn Q. Leffler—406(A)
 Carleton conference on improving the quality and effectiveness of introductory physics courses, Frank Verbrugge—327(T)
 Concerning the fellows of the American Physical Society, F. R. Hirsh, Jr.—303
 Conference on physics in education—332
 Discussion on vocational guidance, R. W. Kenworthy and Kenneth Clark—498(T)
 How can physicists use physics to meet the increased teaching loads? Louis R. Weber, Paul F. Bartunek, Mario Iona, and Lawrence N. Hadley—392(T)
 Improving the quality and effectiveness of introductory physics courses, R. Ronald Palmer, Walter C. Michels, Frank Verbrugge, Gerald Holton, and G. C. Higgins—401(T); Frank Verbrugge, Walter C. Michels, Francis W. Sears, and R. Ronald Palmer—417
 Industrial student-aid programs as an aid in educating undergraduate physics majors, Edwin M. Vaughan—404(A)
 Need for good teaching, Roy E. Simpson—474
 Physics teaching in Germany, John J. Domingo—390(T)
 Program of the Advisory Board on Education, J. S. Coleman—496(T)
 Reconstruction in physics, A. V. Bushkovitch—193
 Scholarship awards program of the Chesapeake Section, Bernard B. Watson—359
 Science and engineering education, Richard B. Adler—109
 Science fair movement in Wisconsin, Rev. L. W. Friedrich—47(T)
 Science teaching improvement program of AAAS, Norman A. Watson—588(T)
 Selling science, Ray Peach—328(T)
 Shell merit program, Paul DeH. Hurd—207(T)
 Some goals for advanced undergraduate work in physics, F. T. Worrell—46(A)
 Teaching of physics in Russia, Vadim G. Drozin—590(T)
 Term papers in senior courses in physics, L. Muldawer—19
 What an engineer would like to find in physics and mathematics courses, George W. Gleeson—393(T)
 What kind of cooperation with colleges do high school physics teachers want? Haym Kruglak—318

Electricity and magnetism

Charge and current distributions in the Bohr atom, Moody L. Coffman—328(T)
 Charge and discharge of a capacitor, A. Capacelatro and M. Mainardi—44(A)
 Coefficient of restitution for "collisions" of charged spheres, Stephen J. Fountain—588(A)
 Coefficient of restitution for magnetic "collisions," James W. Patmore—585(A)
 Conversion of solar to electrical energy, G. L. Pearson—400(T), 591
 Correction to the magnetic field distribution for an ellipsoid, G. O. McClurg—266(L)
 David Alter on the light of the electric spark, E. C. Watson—630
 Definition of magnetic flux density B , Reuben Benumof—405(A)
 Demonstration of electrical transients, Douglas H. Rogers—64
 Dimensions and units in electromagnetism, George L. Trigg—117
 Dipole field configurations as seen from various angles, Malcolm Correll—406(A)
 Directions for applying Kirchhoff's rules, George Barnes—40; E. J. Zimmerman—581
 Earth's magnetic field—what is it? Howard C. Long—590(A)
 Effect of a dc field on the life and stability of pulsed, heated, field emission cathodes, J. P. Barbour, R. L. Floyd, R. W. Strayer, E. E. Martin, J. K. Troian, and W. P. Dyke—496(A)
 Electrostatic classification of aerosols by ionic diffusion, Ross Gunn—542
 Electrostatic potential in crystals, Earl Callen—138
 Erratum: rationalized mks system of units, Seville Chapman—50
 Flux changes in ferromagnetic wires, Grant O. Gale—404(A)
 Forgotten magneto-optical effect, John R. Lamarsh—17
 Galvanometer resistance and linearity, Bernard L. Miller—617
 Generalizations of the virial theorem, R. M. Schechtman and R. H. Good, Jr.—219
 Half-wave, full-wave rectification and filter action without an oscilloscope, Sérgio Mascarenhas—583
 Introductory experiment in electrical measurements, Francis T. Worrell—356
 Kirchhoff's laws and Maxwell's cyclic currents—a pedagogical point, W. W. Robertson—38
 Let us use one hand, Henry S. C. Chen—404(A)
 Measurement of high resistance, S. W. Leifson—89; 207(A)
 Neglected quadrupole, George Arfken—481
 On the relations between light and electricity, E. C. Watson—335; Heinrich Rudolf Hertz (reprint)—336
 Photoelectric properties of thin silver film, J. G. Skinner—496(A)
 Properties of vacuum as a switching ambient, M. M. Khalifa—45(A)
 Qualitative study of electrostatics with inexpensive equipment, Andrew Wartella—589(A)
 Reciprocal retarded potentials, F. W. Warburton—44(A)
 Representation of effects of the Overhauser type, J. H. Manley—539
 Resistance in absolute units by a combination of bridge and resonant circuits, Donald S. Ainslie—I; D. S. Ainslie—44(A)
 Simple expressions for the two-dimensional Maxwell stress distribution in ideal dielectrics, G. Power—344
 Worldwide propagation of super low-frequency lightning radiation, P. A. Goldberg—268(A)

Experiments
 Addition to the ballistic pendulum experiment, George Barnes—452
 Automatic constant pressure regulator for gas viscosity and other measurements, N. Fuschillo—648
 Concerning Dr. Satterly's ice and water vibration experiment, John W. MacArthur—205
 Condensers, experiments with, S. W. Leifson—587(A)
 Determination of the power characteristics of an electric motor using a Prony brake, T. G. Bullen—382
 Displacement, velocity, and acceleration measured, recorded, and graphed from data taken in an automobile, Albert V. Baez—121(T)
 Electric spoon experiment, O. Riedel and O. Schuette—323
 Elementary experiment in deriving an empirical relationship, Francis T. Worrell and Malcolm Correll—406(A)

- Elementary physics laboratory instruction at the Massachusetts Institute of Technology, Sanborn C. Brown—446
- Galvanometer resistance and linearity, Bernard L. Miller—617
- Heat bridge for measuring thermal conductivity, G. F. Landegren—532
- Introductory experiment in electrical measurements, Francis T. Worrell—356
- Laboratory experiment on the Compton effect, Douglas Hunt and A. A. Bartlett—391(A)
- Measurement of high resistance, S. W. Leifson—89; 207(A)
- Method for determining the density of a wood block, using Archimedes' principle, Waldemar Noll—39
- Method to facilitate observation of the green flash, H. Clay Gorton—586(L)
- Newton's law of cooling, G. F. Landegren—648
- Note on relativistic clock experiments, Marcel J. E. Golay—494(L)
- Nuclear spin echo experiments and the foundations of statistical mechanics, Jerome Rothstein—510
- On the determination of the resistance and nonlinearity of a galvanometer, Bernard L. Miller—403(A)
- Physical pendulum, Robert F. McCune—590(A)
- Physically significant experiments in the electronic laboratory, John J. Faris—392(T)
- Pinhole-camera experiment for the introductory physics course, Albert V. Baez—636
- Pinhole camera experiment to introduce geometrical optics, wave optics, and quantum optics, Albert V. Baez—121(T)
- Proportional counters for demonstration experiments, A. Moljk and R. W. P. Drever—165
- Qualitative study of electrostatics with inexpensive equipment, Andrew Wartella—589(A)
- Reflection and absorption of neutrons, experiment on, R. J. Stephenson and T. F. Samsel—632
- Resistance in absolute units by a combination of bridge and resonant circuits, Donald S. Ainslie—I; D. S. Ainslie—44(A)
- Satisfactory unknown cell for general physics potentiometer experiments, Willard L. Erickson—392(A)
- Satisfying "thick lens" experiment, Thomas H. Wood—281
- Simple laboratory method for the determination of the coefficient of heat conductivity, Byron E. Cohn, Mario Iona, and Alex M. Sturrock—392(A)
- Simple optics for an elliptic polarimeter, and "specimens" of elliptically polarized light, Thomas B. Brown—403(A)
- Snell's law, experiment on, Carl V. Bertsch and Bernard A. Greenbaum—402(A)
- Some experiments should emphasize principles, not precision, Edward M. Little—491
- Special switches for the *B-H* curve experiment, W. N. Lowry—589(A)
- Student exercises on Newton's second law and on impact for the elementary college laboratory, S. J. Socolar—402(A)
- Study of the triode in the elementary laboratory, Edward P. Clancy—204
- Transverse waves in a cord, experiment on, Ira M. Freeman—486
- Velocity and acceleration, experiment using an automobile, Albert V. Baez—129
- Vibrating spring experiment, Clifton Bob Clark—322
- Viscoelasticity, experiments in, D. G. Ivey—45(A)
- General physics, educational aspects**
- Conference on introductory physics courses, Frank Verbrugge—127
- Improving the quality and effectiveness of introductory physics courses, R. Ronald Palmer, Walter C. Michels, Frank Verbrugge, Gerald Holton, and G. C. Higgins—401(T); Frank Verbrugge, Walter C. Michels, Francis W. Sears, and R. Ronald Palmer—417
- On understanding and memorizing, Julius Sumner Miller—267(L)
- One-year introductory course in a liberal arts college, Walter C. Michels—430
- Physicists and elementary science, William M. Pierce—403(A)
- Physics in the junior college, James H. Garfinkel—327(T)
- Reconstruction in physics, A. V. Bushkovich—193
- Student theories: gravitation, Walter D. O'Connell—389(A)
- Syllabus for the one-year college course in physical science, Gerald Holton—425
- Three-semester introductory course for engineers and science majors, R. M. Whaley—432
- General physics, instructional techniques**
- Brainstorming, J. W. Buchta—327(T)
- Computation demonstration in mechanics, Paul O. Hoffmann and Eivind G. F. Ramberg—285
- Directions for applying Kirchhoff's rules, George Barnes—40; E. J. Zimmerman—581
- Do you drop stones? Louis R. Weber—407(A)
- Heterogeneous ideas for the classroom and laboratory, Julius Sumner Miller—389(T)
- Kirchhoff's laws and Maxwell's cyclic currents—a pedagogical point, W. W. Robertson—38
- Note on the Cartesian diver; another adventure in teaching, Julius Sumner Miller—407(A)
- Observations on a wet roadway—an adventure in teaching, Julius Sumner Miller—493(L)
- Physics, an earthly and moon-struck subject, Paul F. Bartunek—392(A)
- Practical aids for physics teachers—158, 261, 264, 278, 305, 321, 381, 509, 546
- Split sections and learning in college physics, Ralph H. Blumenthal—332
- Teaching with the polygraph, M. G. Odier—51
- Geophysics**
- Birth and death of a star, Allan Sandage—525
- Current research in physical oceanography, D. W. Pritchard—208(T)
- Determination of air density at high altitude by means of an earth satellite, G. Leitmann—115
- Earth's magnetic field—what is it? Howard C. Long—590(A)

Radio and television

- Bell System Science Series Programs—435
 Elementary physics course presented over television, Alan T. Wager—
 —9
 Mystery of cosmic rays—502
 Radio-astronomy, D. A. MacRae—44(T)

Relativity

- Note on relativistic clock experiments, Marcel J. E. Golay—494(L)
 Paradox of the twins, Royal M. Frye and Virginia M. Brigham—
 553
 Relativistic concepts and quantum phenomena, E. P. Wigner—
 401(T)
 Simplification of relativistic mass equations, Leslie H. Bryant—484
 Some notes on the simplification of equations involving relativistic
 mass, Leslie H. Bryant—588(A)
 Theory of the relativistic oscillator, L. A. MacColl—535
 Time dilation and the Doppler effect, Joseph D. Robinson and
 Eugene Feenberg—490

Reports, announcements, and news

- Activities of the California Mathematics Council, Southern California
 Section, William H. Glenn, Jr.—390(T)
 American Institute of Physics building fund—149, 317
 Colloquium of college physicists—192, 300
 Conference on laboratory instruction in general physics—tentative
 program—310
 Conference on physics in education—332
 Current physics in Japan, Makoto Takeo—268(A)
 Electron Microscope Society of America—495
 Minnesota area association, George R. Stubbs—327
 New NSF summer institutes, report on, James Bradford—47(T)
 Nobody knows: a survey of unsolved problems and forgotten facts,
 Robert E. Pike and Ralph B. Winn—154
 Northern California Association of Physics Teachers, Walton Wickett—
 —206
Nuclear Instruments—199
Physics Review—202
 Pittsburgh conference on the need for high school physics in an
 industrial community, report on, W. C. Kelly—331
 Science for the blind—647
 Scientific writing, R. R. Newell—208(T)
 Smithsonian Institution—369
 Spectroscopy seminar—629
 The 1957 Puget Sound science fair, Martin E. Nelson—498(T)
 Trip to Edwards Rocket Base, Harley Haden—389(T)

Rockets

- Determination of air density at high altitude by means of an earth
 satellite, G. Leitmann—115
 Exploration of outer space with an earth satellite, John P. Hagen—
 44(T)
 Note on the limiting velocity of a rocket when the mass ratio ap-
 proaches unity, Albert Wertheimer—385
 Satellites of the earth, James A. Van Allen—269(T)
 Vanguard satellite vehicle, Robert Beal—208(T)

Secondary school physics

- Advanced standing and the honors program in high school, Vernon
 L. Bollman—121(T); Willard Geer—121(T)
 Alternating current vector problems in high schools, T. A. Shotwell—
 393(T)
 Atomic energy to enter high school classrooms—248
 Committee on Secondary Physics Teaching Materials—a progress
 report, S. Winston Cram—274
 Crisis in secondary school physics, Sanborn C. Brown, Alvin C.
 Eurich, Harry Schwartz, J. A. Campbell, and Walter C. Michels—
 400(T)
 Division major at Beloit for high school science teachers, James
 Bradford—47(T)
 High school preparation in technical and mathematical fields in
 Russia and the U. S., Paul DeH. Hurd—588
 High school science and mathematics supplementary training pro-
 gram, C. H. Sorum—47(T)

How can colleges help foster pre-college physics? Dorothy Goodman,
 Melvin Moses, Tom D. Taylor, Coleman M. Loyd, John D.
 McLean, and Robert S. Brown—328(T)

How the problem is handled in the U.S.S.R., Harry Schwartz—
 400(T)

Look at high school physics teaching, Paul DeH. Hurd—207(A)
 Nature, magnitude and gravity of the problem, Alvin C. Eurich—
 400(T)

Objectives of high school and college physics courses and how they
 compare, Alfred Butler, Jere Lord, and Ralph Nelson—498(T)
 Present activities and plans for the future, Walter C. Michels—
 400(T)

Reading of a resolution on teaching of physics in high schools,
 Robert O. Delzell—588(T)

Reed College and the Portland program for superior students, K. E.
 Davis—207(A)

Report on the Pittsburgh conference on the need for high school
 physics in an industrial community, W. C. Kelly—331

Report and discussion on high school relations, Arthur Ladd, William
 Dittrich, Martin E. Nelson, and A. W. Phillips—498(T)

What kind of cooperation with colleges do high school physics teach-
 ers want? Haym Kruglak—318
 What the high school can do to develop interest in physics, Charles
 W. Rutschky, Jr.—590(T)

Social and economic aspects of science

Analysis of the social consequences of scientific discovery, Richard
 L. Meier—602

Solid-state physics

- Angular correlation of annihilation of positrons in solids, Louis
 Brown—328(T)
 Angular correlation of annihilation radiation in ionic crystals, W. E.
 Millett—328(T)
 Conversion of solar to electrical energy, G. L. Pearson—400(T),
 591
 Demonstration of electron and hole injection in alkali halides,
 Herbert N. Hersh and Leonard Bronstein—306
 Descriptive theory of semiconductors, Earl L. Steele—174
 Infrared transmission through germanium from one to twenty-five
 microns wavelength as a function of temperature, R. D. Etters—
 267(A)
 Present status of semiconductor development, Gordon K. Teal—
 328(T)
 Spectroscopy of the solid state, G. H. Dieke—208(T)

Sound

- Acoustic dipole: its importance in the field of acoustics and also as
 a teaching tool in other branches of physics, Robert H. Randall—
 406(A)
 Basic concepts of ultrasonic interferometry in liquids, E. F. Carome,
 F. A. Gutowski, and D. E. Schuele—556
 Interference pattern of beats, L. G. Hoxton—407(A)
 Interpreting Chladni figures, Mary D. Waller—157
 On a derivation of the equation for the speed of sound by W. W.
 Sleator, Austin J. O'Leary—115
 Production of Chladni figures, Harald C. Jensen—203
 Pulse: a simplified approach to wave motion, J. J. Heilemann—
 45(A)
 Reciprocity calibrations, Eugene Ackerman and William Holak—454

Teacher training

- Division major at Beloit for high school science teachers, James
 Bradford—47(T)
 On teaching college science teachers to teach, Charles Süskind—200
 Refresher course for high school physics teachers, A. D. Misener—
 46(A)
 Summer course in physics for high school teachers, John R. Green—
 —262

Testing, theory and techniques

- Christmas examination—general physics, George W. Horton—531
 Grading papers can be enjoyable, Louis R. Weber—405(A)
 Report and discussion of the objectives of science and the testing
 program, Arnold Lahti, Donald Kerlee, and Jere Lord—498(T)

Some variations of the multiple choice question, Ralph A. Goodwin—403(A)
 Variation of the multiple-choice question, R. A. Goodwin and E. R. Pinkston—46(A)

Textbooks

Book Review: *An introductory course in college physics* by Newton Henry Black and Elbert Payson Little, Leon E. Smith—329
 Book Review: *Applied electrical measurements* by Isaac F. Kinnard, Horatio W. Lamson—498
 Book Review: *Atomic quest* by Arthur Holly Compton, Richard L. Doan—397
 Book Review: *Discovering physics* by Harold P. Knauss, Alan T. Wager—49
 Book Review: *Elementary crystallography* by M. J. Buerger, Dan McLachlan, Jr.—272
 Book Review: *Elementary nuclear theory* by Hans A. Bethe and Philip Morrison, Kenneth W. Ford—48
 Book Review: *Elements of x-ray diffraction* by B. D. Cullity, John W. Weymouth—394
 Book Review: *Errors of observation and their treatment* by J. Toppling, Francis T. Worrell—498
 Book Review: *Franklin and Newton—an inquiry into speculative Newtonian experimental science and Franklin's work in electricity as an example thereof* by I. Bernard Cohen, Duane Roller—650
 Book Review: *Humidity* by H. L. Penman, Francis T. Worrell—499
 Book Review: *Introduction to solid state physics* by Charles Kittel, H. Y. Fan—330
 Book Review: *Mathematics for electronics* by Henry M. Nadelman and Frederick W. Smith, Thomas P. Merritt—209
 Book Review: *Molecular beams* by Norman F. Ramsey, John Trischka—48
 Book Review: *Principles and techniques of applied mathematics* by Bernard Friedman, A. Leitner—208
 Book Review: *Scientific uses of earth satellites* by James A. Van Allen, W. A. Calder—396
 Book Review: *Statistical mechanics* by Terrell L. Hill, R. Kikuchi—271

Book Review: *The Barker index of crystals—Volume II* by M. W. Porter and R. C. Spiller, Robert D. Spence—396
 Book Review: *The international dictionary of physics and electronics* by Walter C. Michels (Senior Editor), K. R. Symon—395
 Book Review: *Theory of photons and electrons* by J. M. Jauch and F. Rohrlich, L. Teng—271
 Publications received—121

Units, dimensions, and terminology

Comments concerning units, Robert N. Varney—42(L)
 Deci-scale physics, K. S. Woodcock—46(A)
 Dimensions and units in electromagnetism, George L. Trigg—117
 Empirical gravitational equation, Roy Weinstein—650(L)
 Erratum: rationalized mks system of units, Seville Chapman—50
 Measuring forces in newtons, Gilbert H. Ward—495(L)
 New unit of mass, Edward W. Price—120(L)
 Numbers, scalars, and vectors, George Appleton—121(T)
 On a remarkable relation between atomic and universal constants, Raimondo Baggioini—324

The k in Newton's second law: Proportionality constants versus conversion coefficients, Francis T. Worrell—388(L)

Visual materials and methods

Device for the visual demonstration of group velocity, P. T. Demos—383
 Model to illustrate some properties of vectors in three dimensions, Albert V. Baez—380
 Pittsburgh experiment, Lasl Carter—392(T)
 Science fairs, exhibits, and shows, J. B. Gerhart and R. W. Kenworthy—498(T)

X-rays

Rayotron (a high-voltage generator and x-ray source), Albert V. Baez—499
 X-ray spectroscopy—its use in materials development and control, A. W. Danko—269(T)
